

RFP-012: Vehicle Maintenance Tracking

Client: City Logistics Fleet

Company Background • City Logistics Fleet operates a small delivery fleet and wants better preventive maintenance visibility. • The operations team needs a practical internal tool that supports scheduling and maintenance history.	Current Situation • Vehicle service dates are tracked in spreadsheets and calendar reminders. • Breakdowns and maintenance notes are not stored consistently.
Business Problem • Preventive maintenance is missed and vehicles spend avoidable time out of service. • Managers cannot easily see maintenance history when making operations decisions.	Desired Outcome • A system for vehicle records, maintenance schedules, history, and service reminders. • A clear view of upcoming and overdue maintenance items.
Constraints • The tool should focus on one fleet team and basic service events. • No telematics or live vehicle data integration is expected.	Deliverables Expected • Maintenance tracking application • Scheduling and history views • Reporting snapshot and QA evidence
Suggested User Roles • Fleet coordinator • Mechanic or service recorder • Operations manager	Suggested MVP Scope • Vehicle profiles • Planned maintenance schedule • Service event log and overdue view
Out-of-Scope Warning • Do not build route planning, fuel optimization, or telemetry integrations. • Avoid complex spare-parts inventory management.
